Notice Inviting Quotation (E-Procurement mode)
कोटेशन को आमंत्रित करने की सूचना (इ-प्रोक्योरमेंट मोड)

INDIAN INSTITUTE OF TECHNOLOGY DELHI
भारतीय प्रौद्योगिकी संस्थान दिल्ली
HAUZ KHAS, NEW DELHI-110016
हौज खास, नई त्रिल्ली -110016

Dated/दिनांक: 05/02/2020

Open Tender Notice No. / खुला प्रस्ताव निविदा सूचना नंबर: IITD/CRF(SP-2885)/2020

Indian Institute of Technology Delhi is in the process of purchasing following item(s) as per details as given as under.
इांदियन इांस्टीट्यूट ऑफ टेक्नोलॉजी दिल्ली ने निम्न भावना में निम्न आयाम की छ री की प्रक्रिया में है।

Tender Documents may be downloaded from Central Public Procurement Portal http://eprocure.gov.in/eprocure/app. Aspiring Bidders who have not enrolled / registered in e-procurement should enroll / register before participating through the website http://eprocure.gov.in/eprocure/app. The portal enrolment is free of cost. Bidders are advised to go through instructions provided at ‘Instructions for online Bid Submission’.

Tenderers can access tender documents on the website (For searching in the NIC site, kindly go to Tender Search option and type ‘IIT’. Thereafter, Click on “GO” button to view all IIT Delhi tenders). Select the appropriate tender and fill them with all relevant information and submit the completed tender document online on the website http://eprocure.gov.in/eprocure/app as per the schedule given in the next page.

No manual bids will be accepted. All quotation (both Technical and Financial should be submitted in the E-procurement portal).
कोई मैन्यूअल बोली स्वीकार नहीं की जाएगी। सभी कोटेशन (तकनीकी और वित्तीय दोनों को ई-प्रोक्योरमेंट पोर्टल में जमा करना चाहिए)

**Chairman Purchase Committee**  
*(Buyer Member)*
Instructions for Online Bid Submission/ऑनलाइन बोली (बिड) के लिए निर्देश:
As per the directives of Department of Expenditure, this tender document has been published on the Central Public Procurement Portal (URL:http://eprocure.gov.in/eprocure/app). The bidders are required to submit soft copies of their bids electronically on the CPP Portal, using valid Digital Signature Certificates. The instructions given below are meant to assist the bidders in registering on the CPP Portal, prepare their bids in accordance with the requirements and submitting their bids online on the CPP Portal.

More information useful for submitting online bids on the CPP Portal may be obtained at: http://eprocure.gov.in/eprocure/app

REGISTRATION

1) Bidders are required to enroll on the e-Procurement module of the Central Public Procurement Portal (URL:http://eprocure.gov.in/eprocure/app) by clicking on the link “Click here to Enroll”. Enrolment on the CPP Portal is free of charge.

2) As part of the enrolment process, the bidders will be required to choose a unique username and assign a password for their accounts.

3) Bidders are advised to register their valid email address and mobile numbers as part of the registration process. These would be used for any communication from the CPP Portal.

4) Upon enrolment, the bidders will be required to register their valid Digital Signature Certificate (Class II or Class III Certificates with signing key usage) issued by any Certifying Authority recognized by CCA India (e.g. Sify / TCS / nCode / eMudhra etc.), with their profile.

5) Only one valid DSC should be registered by a bidder. Please note that the bidders are responsible to ensure that they do not lend their DSCs to others which may lead to misuse.

6) Bidder then logs in to the site through the secured log-in by entering their user ID / password and the password of the DSC / eToken.
SEARCHING FOR TENDER DOCUMENTS/ निविदा दस्तावेजों के लिए खोजना

1) There are various search options built in the CPP Portal, to facilitate bidders to search active tenders by several parameters. These parameters could include Tender ID, organization name, location, date, value, etc. There is also an option of advanced search for tenders, wherein the bidders may combine a number of search parameters such as organization name, form of contract, location, date, other keywords etc. to search for a tender published on the CPP Portal.

2) Once the bidders have selected the tenders they are interested in, they may download the required documents / tender schedules. These tenders can be moved to the respective ‘My Tenders’ folder. This would enable the CPP Portal to intimate the bidders through SMS / e-mail in case there is any corrigendum issued to the tender document.

3) The bidder should make a note of the unique Tender ID assigned to each tender, in case they want to obtain any clarification / help from the Helpdesk.

PREPARATION OF BIDS / बोली (बिड) की तैयारी

1) Bidder should take into account any corrigendum published on the tender document before submitting their bids.

2) Please go through the tender advertisement and the tender document carefully to understand the documents required to be submitted as part of the bid. Please note the number of covers in which the bid documents have to be submitted, the number of documents - including the names and content of each of the document that need to be submitted. Any deviations from these may lead to rejection of the bid.

3) Bidder, in advance, should get ready the bid documents to be submitted as indicated in the tender document / schedule and generally, they can be in PDF / XLS / RAR / DWF formats. Bid documents may be scanned with 100 dpi with black and white option.

4) To avoid the time and effort required in uploading the same set of standard documents which are required to be submitted as a part of every bid, a provision of uploading such standard documents (e.g.
PAN card copy, annual reports, auditor certificates etc.) has been provided to the bidders. Bidders can use “My Space” area available to them to upload such documents. These documents may be directly submitted from the “My Space” area while submitting a bid, and need not be uploaded again and again. This will lead to a reduction in the time required for bid submission process.

मानक दस्तावेजों के एक ही सेट को अपलोड करने के लिए आवश्यक समय और प्रयास से बचने के लिए जो प्रत्येक बोली के भाग के रूप में जमा करने के लिए आवश्यक हैं, ऐसे मानक दस्तावेज अपलोड करने का प्रारंभ (जैसे पैन कार्ड, ऑडिटर रिपोर्ट, लेखा परीक्षण प्रमाण पत्र आदि.) बोलीदाताओं को प्रदान किया गया है। ऐसे दस्तावेजों को अपलोड करने के लिए बोलीदाता उनके लिए उपलब्ध "मेरा स्पेस" क्षेत्र का उपयोग कर सकते हैं। बोली जमा करने समय ये दस्तावेज सीधे “मेरा स्पेस" क्षेत्र से जमा किए जा सकते हैं, और उन्हें बार-बार अपलोड करने का जरूरत नहीं है। इससे बोली जमा प्रक्रिया के लिए आवश्यक समय में कमी आएगी।

**SUBMISSION OF BIDS/ बोली (बिड) का जमा करना**

1) Bidder should log into the site well in advance for bid submission so that he/she upload the bid in time i.e. on or before the bid submission time. Bidder will be responsible for any delay due to other issues.

बोलीदाता को बोली प्रस्तुति के लिए अच्छी तरह से साइट पर लॉग इन करने चाहिए ताकि वह समय पर बोली अपलोड कर सके या फिर बोली प्रस्तुत करने के समय से पहले। अन्य मुद्दों के करण किसी भी दीर्घ के लिए बोलीदाता विदेशी रहे।

2) The bidder has to digitally sign and upload the required bid documents one by one as indicated in the tender document.

बोलीदाता की निविदा दस्तावेज में दर्शाए अनुसार एक-एक करके आवश्यक बोली दस्तावेजों को डिजिटल इरादक और अपलोड करना होगा।

3) Bidder has to select the payment option as “on-line” to pay the tender fee / EMD as applicable and enter details of the instrument. Whenever, EMD / Tender fees is sought, bidders need to pay the tender fee and EMD separately on-line through RTGS (Refer to Schedule, Page No.2).

बोलीदाता को निविदा शुल्क / ईएमडी की भुगतान के लिए "ऑन लाइन" के रूप में भुगतान किया जाना चाहिए और उपकरण का विवरण दर्ज करना होगा। जब भी, ईएमडी/ निविदा शुल्क की मांग की जाती है, बोलीदाताओं को टेंडर शुल्क और ईएमडी अलग-अलग आर्थिक एकजुटक के माध्यम से ऑन लाइन पर भुगतान करने की आवश्यकता होती है (अनुसूची पेज नं .2 देखें)।

4) A standard BoQ format has been provided with the tender document to be filled by all the bidders. Bidders are requested to note that they should necessarily submit their financial bids in the format provided and no other format is acceptable. Bidders are required to download the BoQ file, open it and complete the white colored (unprotected) cells with their respective financial quotes and other details (such as name of the bidder). No other cells should be changed. Once the details have been completed, the bidder should save it and submit it online, without changing the filename. If the BoQ file is found to be modified by the bidder, the bid will be rejected.

एक मानक BoQ प्रारूप की सभी बोलीदाताओं द्वारा भरने के लिए निविदा दस्तावेज प्रदान किया गया है। बोलीदाताओं को इस बात का ध्यान रखना चाहिए कि उन्हें आवश्यक प्रारूप में अपनी वित्तीय बोली जमा करनी चाहिए और कोई अन्य प्रारूप स्वीकार्य नहीं है। बोलीकर्ताओं को BoQ फाइल को डाउनलोड करने, इसे खोलने और अपने संबंधित वित्तीय उद्धरण और अन्य विवरण (जैसे बोलीदाता का नाम) के साथ संपूर्ण रूप से (अणुरुक्त) कोडिकाओं को पूरा करना आवश्यक हैं। कोई भी अन्य कक्ष नहीं बदला जाना चाहिए। एक बार विवरण पूरा हो जाने पर, बोलीदाता को इसे सहेजना होगा और इसे ऑनलाइन जमा करना होगा, जिसे फाइल नाम बदलना। यदि BoQ फाइल को बोलीदाता द्वारा संशोधित किया गया है, तो बोली को खारिज कर दिया जाएगा।

5) The server time (which is displayed on the bidders’ dashboard) will be considered as the standard time for referencing the deadlines for submission of the bids by the bidders, opening of bids etc. The bidders should follow this time during bid submission.

सर्वर का समय (जो बोलीदाताओं के इंटरफेस पर प्रदर्शित होता है) बोलीदाताओं द्वारा बोलियों को खोलने के लिए समय सीमा को संदर्भित करने के लिए मानक रूप में या साइट पर जमा किया जाएगा। बोलीदाताओं को खोलना आदि। बोलीदाताओं को बोली प्रस्तुत करने के दौरान इस समय का पता लिया करना चाहिए।
6) All the documents being submitted by the bidders would be encrypted using PKI encryption techniques to ensure the secrecy of the data. The data entered cannot be viewed by unauthorized persons until the time of bid opening. The confidentiality of the bids is maintained using the secured Socket Layer 128 bit encryption technology. Data storage encryption of sensitive fields is done.

रोलीदाताओं द्वारा प्रस्तुत सभी दस्तावेज पीकेआई एक्रिप्शन तकनीकों का उपयोग करके एक्रिप्ट किया जाएगा जिससे डेटा की गोपनीयता सुनिश्चित हो सके। व्यक्ति सीधे डेटा की अनन्तिकृत व्यक्तियों द्वारा बोली खोलने के समय तक नहीं देखा जा सकता है। बोलियों की गोपनीयता को सुरक्षित संकेत लेपर 128 बिट एक्रिप्शन तकनीक का उपयोग कर रखा जाता है। संचालनशील क्षेत्रों का डेटा संग्रहण एक्रिप्शन किया जाता है।

7) The uploaded tender documents become readable only after the tender opening by the authorized bid openers.

अपलोड किए गए निविदा दस्तावेज केवल अधिकृत रोलीदाता द्वारा निविदा खोलने के बाद ही पहली बार सकते हैं।

8) Upon the successful and timely submission of bids, the portal will give a successful bid submission message & a bid summary will be displayed with the bid no. and the date & time of submission of the bid with all other relevant details.

अपने प्रस्तुतियों के सफल और समय पर जमाने के बाद, पोर्टल एक सफल प्रस्तुति संदेश देंगे और एक प्रस्तुति योजना के साथ बूथ प्रस्तुत बोली संख्या के साथ दर्शाएंगे। और अन्य सभी प्रारंभिक विवरणों के साथ बूथ प्रस्तुत करने की तारीख और समय।

9) Kindly add scanned PDF of all relevant documents in a single PDF file of compliance sheet.

कृपया अनुपलन पत्र की एक पीडीएफ फाइल में सभी प्रारंभिक दस्तावेजों के स्कैन किए गए पीडीएफ को जोड़ें।

**ASSISTANCE TO BIDDERS** / रोलीदाताओं के सहायता

1) Any queries relating to the tender document and the terms and conditions contained therein should be addressed to the Tender Inviting Authority for a tender or the relevant contact person indicated in the tender.

निविदा दस्तावेज से संबंधित कोई भी प्रश्न और इसमें निहित नियमों और शर्तों को निविदा आमंत्रण प्राप्तिकरण को निविदा के लिए या निविदा में वर्णित प्रारंभिक संपर्क व्यक्ति से संबंधित किया जाना चाहिए।

2) Any queries relating to the process of online bid submission or queries relating to CPP Portal in general may be directed to the 24x7 CPP Portal Helpdesk. The contact number for the helpdesk is 1800 233 7315.

ऑनलाइन बूथ प्रस्तुत करने या सामान्य में सीपीपी पोर्टल से संबंधित प्रश्नों की प्रक्रिया से संबंधित कोई भी प्रश्न 24x7 सीपीपी पोर्टल हेल्पडेस्क पर निर्देशित किया जा सकता है। हेल्पडेस्क के लिए संख्या 1800 233 7315 है

**General Instructions to the Bidders** / रोलीदाताओं के लिए सामान्य निर्देश

1) The tenders will be received online through portal [http://eprocure.gov.in/eprocure/app](http://eprocure.gov.in/eprocure/app). In the Technical Bids, the bidders are required to upload all the documents in .pdf format.

निविदाएं पोर्टल [http://eprocure.gov.in/eprocure/app](http://eprocure.gov.in/eprocure/app) के माध्यम से ऑनलाइन प्राप्त होगी तकनीकी बोलियों में, बोलीदाताओं को सभी दस्तावेजों को पीडीएफ प्रारूप में अपलोड करना होगा।

2) Possession of a Valid Class II/III Digital Signature Certificate (DSC) in the form of smart card/e-token in the company's name is a prerequisite for registration and participating in the bid submission activities through [https://eprocure.gov.in/eprocure/app](https://eprocure.gov.in/eprocure/app). Digital Signature Certificates can be obtained from the authorized certifying agencies, details of which are available in the web site [https://eprocure.gov.in/eprocure/app](https://eprocure.gov.in/eprocure/app) under the link “Information about DSC”.

कंपनी के नाम में स्मार्ट कार्ड / ऐ-टोकन के रूप में मान्य क्लास II / III डिजिटल हस्ताक्षर प्रमाण पत्र (डीएससी) के पंजीकरण के लिए एक शर्त है और [https://eprocure.gov.in/eprocure/](https://eprocure.gov.in/eprocure/) के माध्यम से बूथ प्रस्तुत करने की गतिविधियों में भाग लेने के लिए।
3) Tenderer are advised to follow the instructions provided in the ‘Instructions to the Tenderer for the e-submission of the bids online through the Central Public Procurement Portal for e-Procurement at https://eprocure.gov.in/eprocure/app.

निविदाकर्ता को सलाह दी जाती है कि वे निविदाकार को निर्देश दिए गए हों ताकि ई-प्रोक्योरमेंट के लिए सेंटरल पब्लिक प्रोकॉर्मेंट पोर्टल के जरिए https://eprocure.gov.in/eprocure/app पर ऑनलाइन निविदाएं जमा कर सकें।
Subject: 300 kV cryoelectron microscope

Invitation for Tender Offers

Indian Institute of Technology Delhi invites online Bids (Technical bid and Commercial bid) from eligible and experienced OEM (Original Equipment Manufacturer) OR OEM Authorized Dealer for **300 kV cryoelectron microscope** with (warranty period as stated under technical specifications of this tender) on site comprehensive warranty from the date of receipt of the material as per terms & conditions specified in the tender document, which is available on CPP Portal.

*Only vendors who are able to supply the main equipment and the accessories all together can quote. And the vendor must be compliant with respect to the following specifications asked.*

[http://eprocure.gov.in/eprocure/app](http://eprocure.gov.in/eprocure/app)

**TECHNICAL SPECIFICATION:**

Tender are invited from reputed manufacturers and their authorized vendors for the supply of 300 kV cryoelectron microscope with the following or better technical specifications. The technical weightage allotted to each item is mentioned.

If any of the technical specifications offered are better than those listed, clear comparison should be provided in the compliance statement with a separate “Remarks” highlighting how the specification is better than that listed.

<table>

<td></td>
<td></td>
<td>1.3 Resolution: A point resolution of 0.25 nm or better, and information limit of 0.14 nm or better.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>1.4 Vacuum System: Fully automatic, differential, oil free pumping system and ion-getter/sputter ion pumps. The system should have adequate number of pumps for the column, gun and specimen chamber, to ensure that the pressure in</td>
<td></td>
</tr>
</tbody>
</table>
the gun area is $\leq 10^{-7}$ Pa, and that in the column area is $\leq 10^{-6}$ Pa. Suitable vacuum pump for camera section should be provided. A fully automatic sequential control for operation of vacuum pumps is required. Pumping time from start to ultimate vacuum should be less than 60 minutes, and the vacuum recovery time after specimen exchange should be less than 10 minutes.

1.5 Lens System: The condenser lens system should comprise of at least three lenses for providing a parallel beam for high resolution, phase-contrast and low dose imaging as well as electron diffraction. The beam intensity should be user selectable, and documentary proof of quantitative values for convergence angle, size of illumination and electron dose should be provided.

The intermediate and projector lenses should have the following characteristics:

The minimum range of camera lengths in diffraction mode should be 300 - 5000 mm, or better, at 300 kV

The magnification range should be 50x – 450,000x or better, with reproducibility to within $\pm 1.5\%$, and should produce distortion and rotation free images.

The system should have constant power objective lens, with minimal aberrations at eucentric point, and the spherical and chromatic aberration coefficients ($C_s$ and $C_c$) should be 2.7 mm or better at 300 kV.

All lens systems should have low hysteresis, and fast switching between operation modes should be possible.

The following aperture holders are required: an objective aperture holder, with at least one aperture appropriate for different imaging conditions; two condenser aperture holders (C1 and C2), each with at least four apertures; a selected area aperture holder, with at least four apertures. All aperture holders must be motorized to maximize the degree of automation.
1.6 Sample stage: Stage should be computer controlled with a range of movements specified in mm for the X, Y and Z axes.

The stage position should be reproducible. After a specimen movement of 500 μm in x and y, the stage should relocate sample position with a reproducibility of ≤0.5 μm.

Minimum movement increments should be less than 0.5 μm in X and Y directions and 0.5° tilt.

The tilt range should be at least ± 70°.

The maximum sample drift rate should be 0.01 nm/s after complete equilibration. The specimen drift rate should be ≤ 0.25 nm/s or better, and ≤ 0.05 nm/s or better, after 30 minutes and 90 minutes of specimen exchange respectively.

The specimen height should be adjustable to allow eucentric tilting. The eucentricity during ±70° tilting should be ≤ 2 μm in X and Y, and ≤ 4 μm in Z (defocus change).

1.7 Sample holders: An automatic system that enables successive loading of at least 4 grids with minimal breaks in vacuum is required.

It is expected that the specimen insertion will be quick and easy so that inspection of the grid, focusing and recording of an image, and removal of the grid can be accomplished within 30 minutes.

The grid exchange mechanism should be highly automated, reliable, free of ice contamination and suitable for high throughput applications.

The specimen holder should be able to tilt up to at least ± 70°. Rotation of the specimen to at least 90° in plane for dual axis tomography is desirable. In plane rotation at angles other than 90° is also agreeable.

All accessories required for operation in cryo- as well as ambient temperature, and to meet the conditions mentioned above, should be provided.
1.8 Phase plate: The system should be equipped with a phase plate. The type of phase plate, stability, location and expected contrast enhancement should be clearly mentioned. It is expected that the phase plate should be able to enhance contrast by a factor of 1.4 or more. All phase-plate specific consumables for regular operation of the cryoEM within the warranty period should be provided.

1.9 Imaging & Operation: The system should be capable of recording images of unstained, rapidly-frozen thin films or high-pressure frozen and sectioned biological material, with specimen thicknesses up to 1 μm.

The system should operate in the following modes- bright field, dark field, atomic resolution imaging, low dose mode with standard, separate preset Search/Focus/Exposure conditions, as well as in diffraction mode. Details of the proposed low dose imaging system should be included in the submitted documentation.

The microscope should be supplied with an appropriate tracking system. This tracking system should be capable of recording the areas of the specimen that have been viewed, to prevent repeated imaging of the same sample area.

Any auto-focus / assisted- focus capability and auto-drift compensation system, if available, should be quoted.

The ice contamination rate should be less than 0.2 nm/hr, and the temperature of the frozen specimen in the column should be ≤ 105K, to allow cryoEM data collection on frozen-hydrated samples for at least 3 days (72 hours) at a stretch without detectable sample deterioration.

The system should be robust enough for 24/7 use, and simple enough for operation and maintenance by non-expert users. All day to day controls for the system and accessories should be clearly labelled and intuitive enough for a non-expert user. The advanced controls should be hidden so that their use is limited to expert users or service engineers. The software design
should allow functionality to different levels of users in terms of control and safety.

1.10 Environment: The system should preferably be in an enclosure and protected from interference by an outer shell. The enclosure must ensure thermal and acoustic shielding with \( \leq 0.5^\circ C \) temperature or 20 dBC variation. Remote operation of the microscope should be possible.

1.11 Camera: A fast CMOS camera should be provided beneath the fluorescence screen which can be used for single-particle, tomography and micro-electron diffraction. This general-purpose camera is expected to be either retractable or in a near-axis position and housed in a manner compatible with easy and automated operation along with a direct detection camera. The camera should be fully embedded with data collection/application software and hardware.

The specifications of this camera are as follows:

- High resolution camera with CMOS sensor
- At least 4K X 4K pixel CMOS sensor, pixel size 14 \( \mu m \) or better
- Usable at 80 – 300 kV
- Capable of providing large field of view with high speed video capture (25 fps or better at full resolution)
- Image as well as video recording mode and suitability to do diffraction

An additional direct detector is expected in the same plane with the following specifications
- Sensor size 4K x 4K pixels or better
- Functional at 200 and 300 kV
- Frame rate 40 fps or better
- Electron counting and integration modes
- DQE at \( \frac{1}{2} \) Nyquist should be \( \geq 0.7 \) at 300 kV

1.12 PC: Standard and suitable PC for operation of the system should be provided along with a laserjet colour printer. PC should be factory fitted and tested with pre-loaded, licensed softwares for trouble free operation of the system. Option for high speed attached RAID storage for the PC (using Fibre Channel) should be available.
1.13 Software: Licensed, latest version softwares for automatic image acquisition for single particle, tomography, and electron diffraction; single particle reconstruction and analysis, and tomographic reconstruction should be supplied, installed and supported by the vendor. Any updated versions, when available, should be provided free of cost till the end of warranty period. Any known or suspected incompatibilities with other licensed or open source softwares should be clearly mentioned in the bid.

It is expected that the data acquisition softwares should have pre-configured settings that can be easily selected for use with the appropriate standard samples. The softwares should be compatible with direct electron detection camera. Further, use of open source softwares e.g SerialEM should be permissible without affecting warranty of the equipment.

It should be possible to export the acquired data and metadata from the system in multiple formats (e.g., .mrc, .tiff, .jpeg, .txt, .xls etc).

The softwares should have a browser version to allow users an off-line capability to view images, export data & images as well as carrying out basic processing & analyzing functions. It is expected that such a browser would be free, or of minimal cost, and ideally available for Windows, Mac and Linux operating systems.

The software controlling all detectors/cameras is expected to be fully embedded into the operation system of the microscope.

The software and hardware provided should allow the remote controlled operation, including remote diagnosis and servicing.

The safety controls must be implemented in software as well as in hardware for protecting the operators, instrument and specimens.

2.

2.1 Energy filter

The microscope should have either an in-column or a post-column energy filter. The energy filter (EF) will be used for zero energy-loss imaging of biological samples (frozen biological samples...
or sectioned cells/tissues).

Energy resolution is expected to be 10 eV or better.

The EF should have minimal geometrical distortions, preferably less than 1%.

The alignment and tuning of the filter should be as automated as possible.

The filter is expected to be well-screened from any ambient low-level AC magnetic fields and can be adjusted/aligned to compensate for the effect of stray AC fields in the ambient environment of the microscope room for voltages of 80 – 300 kV (eighty to three hundred kilovolts).

In both post-column and in-column energy filter systems, the microscope should be equipped with a high DQE electron detection camera after the energy-filter for high-resolution data recording. Specifications for the detector are in 2.2.

The performance of the combined cryo-EM and energy filter instrument operating in zero energy-loss mode should meet the following objectives:

It should be possible to observe Thon rings in a high-dose image from an amorphous carbon or Pt- Ir specimen out to the Nyquist resolution in the Fourier transform of an image that is at least 4Kx4K pixels.

Chromatic aberration (image blurring) should be less than 1 pixel/10eV energy spread over the full field of view.

Geometrical distortion should be < 1% over the full field of view.

Non-isochromaticity should be less than 2 eV over the full field of view.

It should be possible to use the EF at 80, 200 and 300 kV.

The filter alignments for above voltages should
| 2.2 Detector | be provided. Direct detection camera having the following features should be provided (to be mounted either after the energy filter in case of post-column filter or beneath the viewing chamber in case of in-column filter)  

Radiation hardened back-thinned sensor with sensor lifetime of at least 500 million e/pix, with automated magnification calibration, real time fast counting and super resolution or integration read out modes.  

Sensor size should be at least 4K x 4K pixels.  

The physical pixel size of the detector is expected to be smaller (<6 microns) with a sensor read out of at least 1000 frames per second.  

The detector and software provided should be able to do sub-pixel averaging for more accurate determination of incident electrons.  

The detector should allow visualization of Thon rings in a high-dose image from an amorphous carbon or Pt-Ir specimen out to the Nyquist resolution in the Fourier transform of an image that is at least 4K x 4K pixels.  

Camera compatibility should be ensured for either the in-column or post-column energy filter as per the specification above.  

Standard and suitable PC for the operation of the direct detector should be provided. PC should be factory fitted and tested with pre-loaded, licensed softwares for trouble free operation of the system. Option for high speed attached RAID storage is required for the PC (using FibreChannel).  

A complete software suite for all camera functions, low dose readout and low dose automated data acquisition is required. The software controlling the detector is expected to be fully embedded into the operation system of the microscope. Automatic data collection and image acquisition, and camera control should be from the same software platform. |
The software should include a range of pre-configured settings for operating voltages between 80 and 300 kV that can be easily selected for use with appropriate standard samples.

It is expected that the images, data and metadata acquired, and subsequently analyzed and/or manipulated, by the user will be saved in a default format that is widely compatible with other software packages. Details of the proposed software should be included in the tender submission along with any known, or suspected, incompatibilities with other packages. It should be possible to export the acquired data and metadata from the system in multiple formats (e.g. .mrc, .tif, .jpeg, .txt, .xls etc).

A proper frame alignment software, to align the movie frames of collected movie images using the detector, should be supplied.

It is necessary that remote access to, and analysis or manipulation of, data and images is available to users while the detector is collecting primary data. The proposed system should have a high-speed transmission capacity (e.g. 10Gb/s (ten Gigabit/second) Ethernet or equivalent.

The safety controls must be implemented in software as well as in hardware for protecting the operators, instrument and specimens.

The softwares should be updated as required, free of cost.
### 3. Accessories and spares

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Chiller, Compressor and UPS of adequate capacity (≥ 30 kVA) to ensure smooth and noiseless operation of all components should be provided. The chiller and compressor should be compatible with the proposed system, and all details should be provided.</td>
</tr>
<tr>
<td></td>
<td>3.2 One additional set of auto grid loading system accessories that are delivered with the CryoEM e.g. assembly workstation, loading dock, tweezers, transfer dewars etc. should be provided.</td>
</tr>
<tr>
<td></td>
<td>3.3 An automatic filling system for liquid nitrogen should be provided. 2 X 240 L Liquid nitrogen dewars should be provided. Details of the proposed anti-contamination device should be included in the submitted documentation.</td>
</tr>
<tr>
<td></td>
<td>3.4 Plasma cleaner for cleaning cryo-holders, cryo transfer station, cold stage controller, dry pumping stations and all cryo-tools etc. for holders should be provided.</td>
</tr>
<tr>
<td></td>
<td>3.5 Details of proposed anti-contamination device should be included.</td>
</tr>
<tr>
<td></td>
<td>3.6 Data storage and computational infrastructure: Adequate computational infrastructure for data recording and storage along with all required accessories should be provided with the system. Softwares to operate the system, record data, and store and analyze data should be provided. Separate computer (s) should be provided for offline data analysis. High speed storage appliance with capacity of more than 600 TB, and transmission speed of at least 10 Gbps, is preferred. Overall, the computational infrastructure provided should allow smooth operation of the system and analysis of the recorded data. Appropriate software for automated and manual operation, automated and manual data collection in all modes requested above and downstream data analysis for all applications (including single particle and tomography reconstruction) should be provided, as described before.</td>
</tr>
<tr>
<td></td>
<td>3.7 Vitrification system: The vitrification system should be capable of blotting followed by rapid cooling of aqueous samples. The blotting should occur on both sides/one side</td>
</tr>
</tbody>
</table>
of the grid to allow even spreading/drying of the sample.
Operational parameters should be reproducible and device should allow vitrification with high throughput with an easy and straightforward control of the process.
It should be possible to control different parameters associated with the environment of the chamber and the blotting & plunging process.

3.8 Glow discharge/Sputter coater: The glow discharge unit should allow hydrophobic/hydrophilic conversion and hydrophilic /hydrophobic conversions of grids. The design of the unit should allow safe operation with appropriate safety interlocks along with easy-to-use user interface.
A glow discharge unit combined with coater (for carbon as well as heavy metal coating) is preferred. A turbo pump equipped coater is expected.

3.9: Cryo-ultramicrotome: The cryo ultramicrotome should have a built in anti-vibration system, stereomicroscope with at least 50X magnification, and at least three different controllable LED light sources to enable different types of illumination.
A knife stage with controllable cutting window and cutting speed should be provided.
A dual knife holder with the capacity to hold glass and diamond knifes should be present.
The system should be ergonomic and enable comfortable operation with adequate safety features.
A touch screen or PC-based controller should be provided for operation of the ultramicrotome and cryo-chamber. It should be possible to recall stored settings from memory for user operation.
Cryo attachment should enable operation at both ambient and cryogenic temperature, and rapid cooling and warming should be possible.
Efficient LN2 delivery system with indicator and low-level warning should be provided with the system.
A glass knife maker, a diamond knife and trimmer should be provided.
Adequate consumables for sectioning and knife maker should be provided.

4. Technical expertise and It is expected that this system will be heavily utilized by structural and cell biologists in India.
| manpower Requirement | Thus, it is desirable that the vendor has installed at least one, currently functional, equivalent system in India; and at least 20 such equivalent systems worldwide. The following documentation should be provided for establishing technical expertise and support availability:

1. Worldwide installations of 300 kV cryoEM with similar configurations* in the 2015-2020 period, along with performance certificate from at least three major users
2. India-wide installations of 300 kV cryoEM with similar configurations* in the 2015-2020 period, along with performance certificate from at least one major user
3. List of research publications** in Pubmed/Medline/SCI from similar machines in the 2017-2020 period. List of structures submitted to EMDB/PDB should also be provided.
4. List of research publications** in Pubmed/Medline/SCI from similar machines installed in India in the 2017-2020 period. List of structures submitted to EMDB/PDB should also be provided.
5. Current average on-site attendance time within warranty period (In India/worldwide) for similar machines. Information in tabular form with breakdown issue, time of attendance and time of resolution should be provided.

The vendor is expected to provide trained personnel with at least 1 year of experience of operating and maintaining the proposed system, and all accessories. This personnel is expected to assist with installation; and to train scientists, technicians and students of IIT-Delhi, with little or no background knowledge of microscopy, to enable independent and precise operation. This personnel is expected to be involved in all aspects of single particle and tomographic data collection at IIT-Delhi during the warranty period.

| Warranty | Five (5) years comprehensive warranty for the microscope and all accessory equipment, hardware and software is required from the date of installation. During the warranty period, the maximum on-site attendance time from first notification of a problem with either the system or accessory equipment should be 48 hours (2 days). After |

| 5. | Included in section 1 |
clearance of parts from customs, the maximum fix time should be 3 days. Any deviation will result in an extension of warranty by 5 days for per day of non-compliance.

It is expected that comprehensive warranty includes the cost of parts and labor. In case certain spare parts are exempt from warranty, a list of said parts along with documentation indicating the expected lifetimes of these parts, should be supplied. Two free of cost replacements for the FEG source should be provided within the warranty period of 5 years.

An additional 5 year comprehensive warranty (years 6-10) should be quoted separately.

The vendor should provide documentation ensuring availability of spare parts, repair kits as required and technical support for the microscope and all accessories for up to 10 years from the date of installation.

A 10% performance guarantee will need to be maintained during the period of extended warranty.

| 6. | Pre Installation Requirements | Pre-installation requirements: Complete pre-installation requirements should be provided in a separate section during submission of technical bids. No deviation from this document will be entertained during installation. | NA |
| 7. | System Consumable Parts | Basic frequently required spares should be provided for the entire period of extended warranty. A list of these items should be attached with the quotation. | NA |

* Equipment for biological sample usage ONLY

** For biological samples only

**Note:**

Total technical weightage = 75  
5 marks will be awarded at the discretion of the committee, based on the responses to technical queries.

A complete set of tender documents* may be Download by prospective bidder free of cost from the website [http://eprocure.gov.in/eprocure/app](http://eprocure.gov.in/eprocure/app). Bidder has to make payment of requisite fees (i.e. Tender fees (if any) and EMD) online through RTGS/NEFT only.
Terms & Conditions Details

<table>
<thead>
<tr>
<th>Sl. No.</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td><strong>Due date:</strong> The tender has to be submitted on-line before the due date. The offers received after the due date and time will not be considered. No manual bids will be considered.</td>
</tr>
<tr>
<td>2.</td>
<td><strong>Preparation of Bids:</strong> The offer/bid should be submitted in two bid systems (i.e.) Technical bid and financial bid. The technical bid should consist of all technical details along with commercial terms and conditions. Financial bid should indicate item wise price for the items mentioned in the technical bid in the given format i.e. BoQ_XXXX. The Technical bid and the financial bid should be submitted Online. <strong>Note:</strong> -Comparison of prices will be done ONLY on the bids submitted for the Main Equipment and anything asked as ‘Optional’ in the specs is not to be included for overall comparison.</td>
</tr>
<tr>
<td>3.</td>
<td><strong>EMD (if applicable):</strong> The tenderer should submit an EMD amount through RTGS/NEFT. The Technical Bid without EMD would be considered as UNRESPONSIVE and will not be accepted. The EMD will be refunded without any interest to the unsuccessful bidders after the award of contract. Refer to Schedule (at page 1 of this document) for its actual place of submission.</td>
</tr>
<tr>
<td>4.</td>
<td><strong>Refund of EMD:</strong> The EMD will be returned to unsuccessful Tenderer only after the Tenders are finalized. In case of successful Tenderer, it will be retained till the successful and complete installation of the equipment.</td>
</tr>
<tr>
<td>5.</td>
<td><strong>Opening of the tender:</strong> The online bid will be opened by a committee duly constituted for this purpose. Online bids (complete in all respect) received along with EMD (if any) will be opened as mentioned at “Annexure: Schedule” in presence of bidders representative if available. Only one representative will be allowed to participate in the tender opening. Bid received without EMD (if present) will be rejected straight way. The technical bid will be opened online first and it will be examined by a technical committee (as per specification and requirement). The financial offer/bid will be opened only for the offer/bid which technically meets all requirements as per the specification, and will be opened in the presence of the vendor’s representatives subsequently for further evaluation. The bidders if interested may participate on the tender opening Date and Time. The bidder should produce authorization letter from their company to participate in the tender opening.</td>
</tr>
<tr>
<td>6.</td>
<td><strong>Acceptance/ Rejection of bids:</strong> The Committee reserves the right to reject any or all offers without assigning any reason.</td>
</tr>
<tr>
<td>7.</td>
<td><strong>Pre-qualification criteria:</strong> (i) Bidders should be the manufacturer / authorized dealer. Letter of Authorization from original equipment manufacturer (OEM) on the same and specific to the tender should be enclosed. (ii) An undertaking from the OEM is required stating that they would facilitate the bidder on a regular basis with technology/product updates and extend support for the warranty as well. (Ref. Annexure-II) (iii) OEM should be internationally reputed Branded Company. (iv) Non-compliance of tender terms, non-submission of required documents, lack of clarity of the specifications, contradiction between bidder specification and supporting documents etc. may lead to rejection of the bid. (v) In the tender, either the Indian agent on behalf of the Principal/OEM or Principal/OEM itself can bid but both cannot bid simultaneously for the same item/product in the same tender. (vi) If an agent submits bid on behalf of the Principal/OEM, the same agent shall not submit a bid on behalf of another Principal/OEM in the same tender for the same item/product.</td>
</tr>
<tr>
<td>8.</td>
<td><strong>Performance Security:</strong> The supplier shall require to submit the performance security in the form of irrevocable bank guarantee issued by any Indian Nationalized Bank for an amount which is stated at page #1 of the tender document within 21 days from the date of receipt of the purchase order/LC and should be kept valid for a period of 60 days beyond the date of completion of warranty period.</td>
</tr>
</tbody>
</table>
| 9.     | **Force Majeure:** The Supplier shall not be liable for forfeiture of its performance security, liquidated...
damages or termination for default, if and to the extent that, it’s delay in performance or other failure to perform its obligations under the Contract is the result of an event of Force Majeure.

- For purposes of this Clause, "Force Majeure" means an event beyond the control of the Supplier and not involving the Supplier’s fault or negligence and not foreseeable. Such events may include, but are not limited to, acts of the Purchaser either in its sovereign or contractual capacity, wars or revolutions, fires, floods, epidemics, quarantine restrictions and freight embargoes.
- If a Force Majeure situation arises, the Supplier shall promptly notify the Purchaser in writing of such conditions and the cause thereof. Unless otherwise directed by the Purchaser in writing, the Supplier shall continue to perform its obligations under the Contract as far as is reasonably practical, and shall seek all reasonable alternative means for performance not prevented by the Force Majeure event.

10. **Risk Purchase Clause**: In event of failure of supply of the item/equipment within the stipulated delivery schedule, the purchaser has all the right to purchase the item/equipment from the other source on the total risk of the supplier under risk purchase clause.

11. **Packing Instructions**: Each package will be marked on three sides with proper paint/indelible ink, the following:
   i. Item Nomenclature
   ii. Order/Contract No.
   iii. Country of Origin of Goods
   iv. Supplier’s Name and Address
   v. Consignee details
   vi. Packing list reference number

12. **Delivery and Documents**: Delivery of the goods should be made within a maximum of 9 months (*for goods ready for shipment*) & *Maximum (To be filled by Purchaser) weeks (For special/ to be fabricated goods) from the date of the opening of LC*. Within 24 hours of shipment, the supplier shall notify the purchaser and the insurance company by cable/telex/fax/e mail the full details of the shipment including contract number, railway receipt number/ AAP etc. and date, description of goods, quantity, name of the consignee, invoice etc. The supplier shall mail the following documents to the purchaser with a copy to the insurance company:
   1. 4 Copies of the Supplier invoice showing contract number, goods’ description, quantity
   2. unit price, total amount;
   3. Insurance Certificate if applicable;
   4. Manufacturer's/Supplier's warranty certificate;
   5. Inspection Certificate issued by the nominated inspection agency, if any
   6. Supplier’s factory inspection report; and
   7. Certificate of Origin (if possible by the beneficiary);
   8. Two copies of the packing list identifying the contents of each package.
   9. The above documents should be received by the Purchaser before arrival of the Goods (except where the Goods have been delivered directly to the Consignee with all documents) and, if not received, the Supplier will be responsible for any consequent expenses.

13. **Delayed delivery**: If the delivery is not made within the due date for any reason, the Committee will have the right to impose penalty 1% per week and the maximum deduction is 10% of the contract value / price.

14. **Prices**: The price should be quoted in net per unit (after breakup) and must include all packing and delivery charges. The offer/bid should be exclusive of taxes and duties, which will be paid by the purchaser as applicable. However the percentage of taxes & duties shall be clearly indicated. The price should be quoted without custom duty and Excise Duty, since IIT Delhi is exempted from payment of Excise Duty and is eligible for concessional rate of custom duty. Necessary certificate will be issued on demand.
In case of imports, the price should be quoted on FOB/FCA origin Airport Basis only. Under special circumstances (e.g. perishable chemicals), when the item is imported on CIF/CIP, please indicate CIF/CIP charges separately up to IIT Delhi indicating the mode of shipment. IIT Delhi will make necessary arrangements for the clearance of imported goods at the Airport/Seaport. Hence the price should not include the above charges. At any circumstances, it is the responsibility of the foreign supplier to handover the material to our forwarder at the origin airport after completing all the inland clearing. No Ex-Works consignment will be entertained.

“In case of CIF/CIP shipments, kindly provide the shipment information at least 2 days in advance before landing the shipment along with the documents i.e. invoice, packing list, forwarder Name, address, contact No. in India to save penalty/demurrage charges (imposed by Indian Customs). Otherwise these charges will be recovered from the supplier/Indian Agent.”

Note: -Comparison of prices will be done ONLY on the bids submitted for the Main Equipment and anything asked as ‘Optional’ in the specs is not to be included for overall comparison.

15. Notices: For the purpose of all notices, the following shall be the address of the Purchaser and Supplier.

Purchaser: Prof. Manidipa Banerjee
Kusuma School of Biological Sciences
Indian Institute of Technology
Hauz Khas, New Delhi - 110016.

Supplier: (To be filled in by the supplier)
(All supplier’s should submit its supplies information as per Annexure-II).

16. Progress of Supply: Wherever applicable, supplier shall regularly intimate progress of supply, in writing, to the Purchaser as under:

1. Quantity offered for inspection and date;
2. Quantity accepted/rejected by inspecting agency and date;
3. Quantity dispatched/delivered to consignees and date;
4. Quantity where incidental services have been satisfactorily completed with date;
5. Quantity where rectification/repair/replacement effected/completed on receipt of any communication from consignee/Purchaser with date;
6. Date of completion of entire Contract including incidental services, if any; and
7. Date of receipt of entire payments under the Contract (In case of stage-wise inspection, details required may also be specified).

17. Inspection and Tests: Inspection and tests prior to shipment of Goods and at final acceptance are as follows:

- After the goods are manufactured and assembled, inspection and testing of the goods shall be carried out at the supplier’s plant by the supplier, prior to shipment to check whether the goods are in conformity with the technical specifications attached to the purchase order. Manufacturer’s test certificate with data sheet shall be issued to this effect and submitted along with the delivery documents. The purchaser shall be present at the supplier’s premises during such inspection and testing if need is felt. The location where the inspection is required to be conducted should be clearly indicated. The supplier shall inform the purchaser about the site preparation, if any, needed for installation of the goods at the purchaser’s site at the time of submission of order acceptance.

- The acceptance test will be conducted by the Purchaser, their consultant or other such person nominated by the Purchaser at its option after the equipment is installed at purchaser’s site in the presence of supplier’s representatives. The acceptance will involve trouble free operation and ascertaining conformity with the ordered specifications and quality. There shall not be any additional charges for carrying out acceptance test. No malfunction, partial or complete failure of
any part of the equipment is expected to occur. The Supplier shall maintain necessary log in respect of the result of the test to establish to the entire satisfaction of the Purchaser, the successful completion of the test specified.

- In the event of the ordered item failing to pass the acceptance test, a period not exceeding one week will be given to rectify the defects and clear the acceptance test, failing which the Purchaser reserve the right to get the equipment replaced by the Supplier at no extra cost to the Purchaser.
- Successful conduct and conclusion of the acceptance test for the installed goods and equipment shall also be the responsibility and at the cost of the Supplier.

18. **Resolution of Disputes**: The dispute resolution mechanism to be applied pursuant shall be as follows:

- In case of Dispute or difference arising between the Purchaser and a domestic supplier relating to any matter arising out of or connected with this agreement, such disputes or difference shall be settled in accordance with the Indian Arbitration & Conciliation Act, 1996, the rules there under and any statutory modifications or re-enactments thereof shall apply to the arbitration proceedings. The dispute shall be referred to the Director, Indian Institute of Technology (IIT) Delhi and if he is unable or unwilling to act, to the sole arbitration of some other person appointed by him willing to act as such Arbitrator. The award of the arbitrator so appointed shall be final, conclusive and binding on all parties to this order.
- In the case of a dispute between the purchaser and a Foreign Supplier, the dispute shall be settled by arbitration in accordance with provision of sub-clause (a) above. But if this is not acceptable to the supplier then the dispute shall be settled in accordance with provisions of UNCITRAL (United Nations Commission on International Trade Law) Arbitration Rules.
- The venue of the arbitration shall be the place from where the order is issued.

19. **Applicable Law**: The place of jurisdiction would be New Delhi (Delhi) INDIA.

20. **Right to Use Defective Goods**
If after delivery, acceptance and installation and within the guarantee and warranty period, the operation or use of the goods proves to be unsatisfactory, the Purchaser shall have the right to continue to operate or use such goods until rectifications of defects, errors or omissions by repair or by partial or complete replacement is made without interfering with the Purchaser’s operation.

21. **Supplier Integrity**
The Supplier is responsible for and obliged to conduct all contracted activities in accordance with the Contract using state of the art methods and economic principles and exercising all means available to achieve the performance specified in the contract.

22. **Training**
The Supplier is required to provide training to the designated Purchaser’s technical and end user personnel to enable them to effectively operate the total equipment.

23. **Installation & Demonstration**
The supplier is required to done the installation and demonstration of the equipment within one month of the arrival of materials at the IITD site of installation, otherwise the penalty clause will be the same as per the supply of materials.

In case of any mishappening/damage to equipment and supplies during the carriage of supplies from the origin of equipment to the installation site, the supplier has to replace it with new equipment/supplies immediately at his own risk. Supplier will settle his claim with the insurance company as per his convenience. IITD will not be liable to any type of losses in any form.

24. **Insurance**: For delivery of goods at the purchaser’s premises, the insurance shall be obtained by the supplier in an amount equal to 110% of the value of the goods from “warehouse to warehouse” (final destinations) on “All Risks” basis including War Risks and Strikes. The insurance shall be valid for a period of not less than 3 months after installation and commissioning. **In case of orders placed on FOB/FCA basis, the purchaser shall arrange Insurance. If orders placed on CIF/CIP basis, the insurance should be up to IIT Delhi.**
25. **Incidental services:** The incidental services also include:
   - Furnishing of 01 set of detailed operations & maintenance manual.
   - Arranging the shifting/moving of the item to their location of final installation within IITD premises at the cost of Supplier through their Indian representatives.

26. **Warranty:**
   (i) Warranty period shall be (as stated at page #2 of this tender) from date of installation of Goods at the IITD site of installation. The Supplier shall, in addition, comply with the performance and/or consumption guarantees specified under the contract. If for reasons attributable to the Supplier, these guarantees are not attained in whole or in part, the Supplier shall at its discretion make such changes, modifications, and/or additions to the Goods or any part thereof as may be necessary in order to attain the contractual guarantees specified in the Contract at its own cost and expense and to carry out further performance tests. The warranty should be comprehensive on site.
   (ii) The Purchaser shall promptly notify the Supplier in writing of any claims arising under this warranty. Upon receipt of such notice, the Supplier shall immediately within in 02 days arrange to repair or replace the defective goods or parts thereof free of cost at the ultimate destination. The Supplier shall take over the replaced parts/goods at the time of their replacement. No claim whatsoever shall lie on the Purchaser for the replaced parts/goods thereafter. The period for correction of defects in the warranty period is 02 days. If the supplier having been notified fails to remedy the defects within 02 days, the purchaser may proceed to take such remedial action as may be necessary, at the supplier’s risk and expenses and without prejudice to any other rights, which the purchaser may have against the supplier under the contract.
   (iii) The warranty period should be clearly mentioned. The maintenance charges (AMC) under different schemes after the expiry of the warranty should also be mentioned. The comprehensive warranty will commence from the date of the satisfactory installation/commissioning of the equipment against the defect of any manufacturing, workmanship and poor quality of the components.
   (iv) After the warranty period is over, Annual Maintenance Contract (AMC)/Comprehensive Maintenance Contract (CMC) up to next two years should be started. The AMC/CMC charges will not be included in computing the total cost of the equipment.

27. **Governing Language**
The contract shall be written in English language. English language version of the Contract shall govern its interpretation. All correspondence and other documents pertaining to the Contract, which are exchanged by the parties, shall be written in the same language.

28. **Applicable Law**
The Contract shall be interpreted in accordance with the laws of the Union of India and all disputes shall be subject to place of jurisdiction.

29. **Notices**
   - Any notice given by one party to the other pursuant to this contract/order shall be sent to the other party in writing or by cable, telex, FAX or e mail and confirmed in writing to the other party’s address.
   - A notice shall be effective when delivered or on the notice’s effective date, whichever is later.

30. **Taxes**
Suppliers shall be entirely responsible for all taxes, duties, license fees, octroi, road permits, etc., incurred until delivery of the contracted Goods to the Purchaser. However, GST etc, in respect of the transaction between the Purchaser and the Supplier shall be payable extra, if so stipulated in the order.

For research purpose(s) **ONLY**, 5% GST will be applicable with concessional GST Certificate.

31. **Duties**
IIT Delhi is exempted from paying custom duty under notification No.51/96 (partially or full) and necessary “Custom Duty Exemption Certificate” can be issued after providing following information
and Custom Duty Exemption Certificate will be issued to the shipment in the name of the Institute, (no certificate will be issued to third party): The procured product should be used for teaching, scientific and research work only.

a) Shipping details i.e. Master Airway Bill No. and House Airway No. (if exists)
b) Forwarder details i.e. Name, Contact No., etc.

IIT Delhi is partially exempted from paying GST and necessary GST Exemption Certificate will be provided for which following information are required.
b) Quotation with details of Basic Price, Rate, Tax & Amount on which ED is applicable
c) Supply Order Copy
d) Proforma-Invoice Copy.

32. **Agency Commission**: Agency commission if any will be paid to the Indian agent in Rupees on receipt of the equipment and after satisfactory installation. Agency Commission will not be paid in foreign currency under any circumstances. The details should be explicitly shown in Tender even in case of Nil commission. The tenderer should indicate the percentage of agency commission to be paid to the Indian agent.

33. **Payment**:

   (i) For imported items Payment will be made through irrevocable Letter of Credit (LC) Cash Against Documents (CAD)/Against delivery/after satisfactory installation by T.T. Letter of Credit (LC) will be established in favour of foreign Supplier after the submission of performance security. The letter of credit (LC) will be established on the exchange rates as applicable on the date of establishment. For Imports, LC will be opened for 100% FOB/CIF value. 80% of the LC amount shall be released on presentation of complete and clear shipping documents and 20% of the LC amount shall be released after the installation and demonstration of the equipment at the INST site of installation in faultless working condition for period of 60 days from the date of the satisfactory installation and subject to the production of unconditional performance bank guarantee as specified in Clause 8 of tender terms and conditions.

   (ii) For Indigenous supplies, 100% payment shall be made by the Purchaser against delivery, inspection, successful installation, commissioning and acceptance of the equipment at IITD in good condition and to the entire satisfaction of the Purchaser and on production of unconditional performance bank guarantee as specified in Clause 9 of tender terms and conditions.

   (iii) Indian Agency commission (IAC), if any shall be paid after satisfactory installation & commissioning of the goods at the destination at the exchange rate prevailing on the date of negotiation of LC documents, subject to DGS&D registration for restricted items.

   (iv) All the bank charges within India will be borne by the Institute and outside India will be borne by the Supplier.

34. **User list**: Brochure detailing technical specifications and performance, list of industrial and educational establishments where the items enquired have been supplied must be provided. (Ref. Annexure-III)

35. **Manuals and Drawings**

   (i) Before the goods and equipment are taken over by the Purchaser, the Supplier shall supply operation and maintenance manuals. These shall be in such details as will enable the Purchaser to operate, maintain, adjust and repair all parts of the works as stated in the specifications.

   (ii) The Manuals shall be in the ruling language (English) in such form and numbers as stated in the contract.

   (iii) Unless and otherwise agreed, the goods equipment shall not be considered to be completed for the purposes of taking over until such manuals and drawing have been supplied to the Purchaser.

36. **Application Specialist**: The Tenderer should mention in the Techno-Commercial bid the availability and names of Application Specialist and Service Engineers in the nearest regional office. (Ref. to Annexure-III)

37. **Site Preparation**: The supplier shall inform to the Institute about the site preparation, if any, needed
for the installation of equipment, immediately after the receipt of the purchase order. The supplier must provide complete details regarding space and all the other infrastructural requirements needed for the equipment, which the Institute should arrange before the arrival of the equipment to ensure its timely installation and smooth operation thereafter.

The supplier shall visit the Institute and see the site where the equipment is to be installed and may offer his advice and render assistance to the Institute in the preparation of the site and other pre-installation requirements.

</tbody>
</table>

| 39. | **Defective Equipment**: If any of the equipment supplied by the Tenderer is found to be substandard, refurbished, un-merchantable or not in accordance with the description/specification or otherwise faulty, the committee will have the right to reject the equipment or its part. The prices of such equipment shall be refunded by the Tenderer with 18% interest if such payments for such equipment have already been made. All damaged or unapproved goods shall be returned at suppliers cost and risk and the incidental expenses incurred thereon shall be recovered from the supplier. Defective part in equipment, if found before installation and/or during warranty period, shall be replaced within 45 days on receipt of the intimation from this office at the cost and risk of supplier including all other charges. In case supplier fails to replace above item as per above terms & conditions, IIT Delhi may consider "Banning" the supplier. |

| 40. | **Termination for Default** |
| The Purchaser may, without prejudice to any other remedy for breach of contract, by written notice of default sent to the Supplier, terminate the Contract in whole or part: |
| i. If the Supplier fails to deliver any or all of the Goods within the period(s) specified in the order, or within any extension thereof granted by the Purchaser; or |
| ii. If the Supplier fails to perform any other obligation(s) under the Contract. |
| iii. If the Supplier, in the judgment of the Purchaser has engaged in corrupt or fraudulent practices in competing for or in executing the Contract. |
| • For the purpose of this Clause: |
| i. “Corrupt practice” means the offering, giving, receiving or soliciting of anything of value to influence the action of a public official in the procurement process or in contract execution. |
| ii. “Fraudulent practice” means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Borrower, and includes collusive practice among Bidders (prior to or after bid submission) designed to establish bid prices at artificial non-competitive levels and to deprive the Borrower of the benefits of free and open competition;” |
| • In the event the Purchaser terminates the Contract in whole or in part, the Purchaser may procure, upon such terms and in such manner, as it deems appropriate, Goods or Services similar to those undelivered, and the Supplier shall be liable to the Purchaser for any excess costs for such similar |
Goods or Services. However, the Supplier shall continue the performance of the Contract to the extent not terminated.

| 41. | **Shifting:** After 1-2 years once our new Academic Block will be ready, the supplier has to shift and reinstall the instrument free of cost (if required). (no need for this clause) |
| 42. | **Downtime:** During the warranty period not more than 5% downtime will be permissible. For every day exceeding permissible downtime, penalty of 1/365 of the 5% FOB value will be imposed. Downtime will be counted from the date and time of the filing of complaint with in the business hours. |
| 43. | **Training of Personnel:** The supplier shall be required to undertake to provide the technical training to the personnel involved in the use of the equipment at the Institute premises, immediately after completing the installation of the equipment for a minimum period of one week at the supplier’s cost. |
| 44. | **Disputes and Jurisdiction:** Any legal disputes arising out of any breach of contract pertaining to this tender shall be settled in the court of competent jurisdiction located within New Delhi. |
| 45. | **Compliancy certificate:** This certificate must be provided indicating conformity to the technical specifications. (Annexure-I) |
# COMPLIANCE SHEET

## TECHNICAL SPECIFICATION

<table>
<thead>
<tr>
<th>No.</th>
<th>Item</th>
<th>Technical Specifications</th>
<th>Marks</th>
<th>Complaince (Yes/No)</th>
</tr>
</thead>
</table>
| 1   | Cryoelectron Microscope             | 1.14 Source: Schottky type or cold Field Emission Gun (FEG) emitter, capable of generating very bright, stable and coherent electron beam with an energy spread of \( \leq 1.0 \text{ eV} \).  
1.15 Acceleration Voltage: 80 - 300 kV, variable either in steps or continuously. Factory aligned at 80, 200 and 300 kV.  
1.16 Resolution: A point resolution of 0.25 nm or better, and information limit of 0.14 nm or better.  
1.17 Vacuum System: Fully automatic, differential, oil free pumping system and ion-getter/sputter ion pumps. The system should have adequate number of pumps for the column, gun and specimen chamber, to ensure that the pressure in the gun area is \( \leq 10^7 \text{ Pa} \), and that in the column area is \( \leq 10^6 \text{ Pa} \). Suitable vacuum pump for camera section should be provided. A fully automatic sequential control for operation of vacuum pumps is required. Pumping time from start to ultimate vacuum should be less than 60 minutes, and the vacuum recovery time after specimen exchange should be less than 10 minutes.  
1.18 Lens System: The condenser lens system should comprise of at least three lenses for providing a parallel beam for high resolution, phase-contrast and low dose imaging as well as electron diffraction. The beam intensity | 30    | Yes                 |
should be user selectable, and documentary proof of quantitative values for convergence angle, size of illumination and electron dose should be provided.

The intermediate and projector lenses should have the following characteristics:

The minimum range of camera lengths in diffraction mode should be 300 - 5000 mm, or better, at 300 kV.

The magnification range should be 50x – 450,000x or better, with reproducibility to within ±1.5%, and should produce distortion and rotation free images.

The system should have constant power objective lens, with minimal aberrations at eucentric point, and the spherical and chromatic aberration coefficients ($C_s$ and $C_c$) should be 2.7 mm or better at 300 kV.

All lens systems should have low hysteresis, and fast switching between operation modes should be possible.

The following aperture holders are required: an objective aperture holder, with at least one aperture appropriate for different imaging conditions; two condenser aperture holders (C1 and C2), each with at least four apertures; a selected area aperture holder, with at least four apertures. All aperture holders must be motorized to maximize the degree of automation.

1.19 Sample stage: Stage should be computer controlled with a range of movements specified in mm for the X, Y and Z axes.
The stage position should be reproducible. After a specimen movement of 500 μm in x and y, the stage should relocate sample position with a reproducibility of ≤0.5 μm.

Minimum movement increments should be less than 0.5 μm in X and Y directions and 0.5° tilt.

The tilt range should be at least ±70°.

The maximum sample drift rate should be 0.01 nm/s after complete equilibration. The specimen drift rate should be ≤ 0.25 nm/s or better, and ≤ 0.05 nm/s or better, after 30 minutes and 90 minutes of specimen exchange respectively.

The specimen height should be adjustable to allow eucentric tilting. The eucentricity during ±70° tilting should be ≤ 2 μm in X and Y, and ≤ 4 μm in Z (defocus change).

1.20 Sample holders: An automatic system that enables successive loading of at least 4 grids with minimal breaks in vacuum is required.

It is expected that the specimen insertion will be quick and easy so that inspection of the grid, focusing and recording of an image, and removal of the grid can be accomplished within 30 minutes.

The grid exchange mechanism should be highly automated, reliable, free of ice contamination and suitable for high throughput applications.

The specimen holder should be able to tilt up to at least ±70°. Rotation of the specimen to at
least 90° in plane for dual axis tomography is desirable. In plane rotation at angles other than 90° is also agreeable.

All accessories required for operation in cryo- as well as ambient temperature, and to meet the conditions mentioned above, should be provided.

1.21 Phase plate: The system should be equipped with a phase plate. The type of phase plate, stability, location and expected contrast enhancement should be clearly mentioned. It is expected that the phase plate should be able to enhance contrast by a factor of 1.4 or more. All phase-plate specific consumables for regular operation of the cryoEM within the warranty period should be provided.

1.22 Imaging & Operation: The system should be capable of recording images of unstained, rapidly-frozen thin films or high-pressure frozen and sectioned biological material, with specimen thicknesses up to 1 μm.

The system should operate in the following modes- bright field, dark field, atomic resolution imaging, low dose mode with standard, separate preset Search/Focus/Exposure conditions, as well as in diffraction mode. Details of the proposed low dose imaging system should be included in the submitted documentation.

The microscope should be supplied with an appropriate tracking system. This tracking system should be capable of recording the areas of the specimen that have been viewed, to prevent repeated imaging of the same sample area.

Any auto-focus / assisted- focus
capability and auto-drift compensation system, if available, should be quoted.

The ice contamination rate should be less than 0.2 nm/hr, and the temperature of the frozen specimen in the column should be ≤ 105K, to allow cryoEM data collection on frozen-hydrated samples for at least 3 days (72 hours) at a stretch without detectable sample deterioration.

The system should be robust enough for 24/7 use, and simple enough for operation and maintenance by non-expert users. All day to day controls for the system and accessories should be clearly labelled and intuitive enough for a non-expert user. The advanced controls should be hidden so that their use is limited to expert users or service engineers. The software design should allow functionality to different levels of users in terms of control and safety.

1.23 Environment: The system should preferably be in an enclosure and protected from interference by an outer shell. The enclosure must ensure thermal and acoustic shielding with ≤0.5°C temperature or 20 dBC variation. Remote operation of the microscope should be possible.

1.24 Camera: A fast CMOS camera should be provided beneath the fluorescence screen which can be used for single-particle, tomography and micro-electron diffraction. This general-purpose camera is expected to be either retractable or in a near-axis position and housed in a manner compatible with easy and automated operation along with a direct detection camera. The camera should be fully embedded with data collection/application software and
The specifications of this camera are as follows:

High resolution camera with CMOS sensor
At least 4K X 4K pixel CMOS sensor, pixel size 14 μm or better
Usable at 80 – 300 kV
Capable of providing large field of view with high speed video capture (25 fps or better at full resolution)
Image as well as video recording mode and suitability to do diffraction

An additional direct detector is expected in the same plane with the following specifications
Sensor size 4K x 4K pixels or better
Functional at 200 and 300 kV
Frame rate 40 fps or better
Electron counting and integration modes
DQE at ½ Nyquist should be ≥0.7 at 300 kV

1.25 PC: Standard and suitable PC for operation of the system should be provided along with a laserjet colour printer. PC should be factory fitted and tested with pre-loaded, licensed softwares for trouble free operation of the system. Option for high speed attached RAID storage for the PC (using Fibre Channel) should be available.

1.26 Software: Licensed, latest version softwares for automatic image acquisition for single particle, tomography, and electron diffraction; single particle reconstruction and analysis, and tomographic reconstruction should be supplied, installed and supported by the vendor. Any updated versions, when available, should be
provided free of cost till the end of warranty period. Any known or suspected incompatibilities with other licensed or open source softwares should be clearly mentioned in the bid.

It is expected that the data acquisition softwares should have pre-configured settings that can be easily selected for use with the appropriate standard samples. The softwares should be compatible with direct electron detection camera. Further, use of open source softwares e.g SerialEM should be permissible without affecting warranty of the equipment.

It should be possible to export the acquired data and metadata from the system in multiple formats (eg .mrc, .tiff, .jpeg, .txt, .xls etc).

The softwares should have a browser version to allow users an off-line capability to view images, export data & images as well as carrying out basic processing & analyzing functions. It is expected that such a browser would be free, or of minimal cost, and ideally available for Windows, Mac and Linux operating systems.

The software controlling all detectors/cameras is expected to be fully embedded into the operation system of the microscope.

The software and hardware provided should allow the remote controlled operation, including remote diagnosis and servicing.

The safety controls must be implemented in software as well as in hardware for protecting the operators, instrument and specimens.
| 2.1 Energy filter | The microscope should have either an in-column or a post-column energy filter. The energy filter (EF) will be used for zero energy-loss imaging of biological samples (frozen biological samples or sectioned cells/tissues).

Energy resolution is expected to be 10 eV or better

The EF should have minimal geometrical distortions, preferably less than 1%.

The alignment and tuning of the filter should be as automated as possible.

The filter is expected to be well-screened from any ambient low-level AC magnetic fields and can be adjusted/aligned to compensate for the effect of stray AC fields in the ambient environment of the microscope room for voltages of 80 – 300 kV (eighty to three hundred kilovolts).

In both post-column and in-column energy filter systems, the microscope should be equipped with a high DQE electron detection camera after the energy-filter for high-resolution data recording. Specifications for the detector are in 2.2.

The performance of the combined cryo-EM and energy filter instrument operating in zero energy-loss mode should meet the following objectives:-

It should be possible to observe Thon rings in a high-dose image from an amorphous carbon or Pt-Ir specimen out to the Nyquist resolution in the Fourier transform of an image that is at least 4Kx4K pixels. | 2.5 |
<table>
<thead>
<tr>
<th>Chromatic aberration (image blurring) should be less than 1 pixel/10 eV energy spread over the full field of view.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Geometrical distortion should be &lt; 1% over the full field of view.</td>
</tr>
<tr>
<td>Non-isochromaticity should be less than 2 eV over the full field of view.</td>
</tr>
<tr>
<td>It should be possible to use the EF at 80, 200 and 300 kV.</td>
</tr>
<tr>
<td>The filter alignments for above voltages should be provided.</td>
</tr>
<tr>
<td>Direct detection camera having the following features should be provided (to be mounted either after the energy filter in case of post-column filter or beneath the viewing chamber in case of in-column filter)</td>
</tr>
<tr>
<td>Radiation hardened back-thinned sensor with sensor lifetime of at least 500 million e/pix, with automated magnification calibration, real time fast counting and super resolution or integration read out modes.</td>
</tr>
<tr>
<td>Sensor size should be at least 4K x 4K pixels.</td>
</tr>
<tr>
<td>The physical pixel size of the detector is expected to be smaller (&lt;6 microns) with a sensor read out of at least 1000 frames per second.</td>
</tr>
<tr>
<td>The detector and software provided should be able to do sub-pixel averaging for more accurate determination of incident electrons.</td>
</tr>
<tr>
<td>The detector should allow visualization of Thon rings in a high-dose image from an amorphous carbon or Pt-Ir specimen out to the Nyquist resolution in the Fourier</td>
</tr>
</tbody>
</table>
transform of an image that is at least 4K x 4K pixels.

Camera compatibility should be ensured for either the in-column or post-column energy filter as per the specification above.

Standard and suitable PC for the operation of the direct detector should be provided. PC should be factory fitted and tested with pre-loaded, licensed softwares for trouble free operation of the system. Option for high speed attached RAID storage is required for the PC (using FibreChannel).

A complete software suite for all camera functions, low dose readout and low dose automated data acquisition is required. The software controlling the detector is expected to be fully embedded into the operation system of the microscope. Automatic data collection and image acquisition, and camera control should be from the same software platform.

The software should include a range of pre-configured settings for operating voltages between 80 and 300 kV that can be easily selected for use with appropriate standard samples.

It is expected that the images, data and metadata acquired, and subsequently analyzed and/or manipulated, by the user will be saved in a default format that is widely compatible with other software packages. Details of the proposed software should be included in the tender submission along with any known, or suspected, incompatibilities with other packages. It should be possible to export the acquired data and metadata from the system in
multiple formats (e.g. .mrc, .tiff, .jpeg, .txt, .xls etc).

A proper frame alignment software, to align the movie frames of collected movie images using the detector, should be supplied.

It is necessary that remote access to, and analysis or manipulation of, data and images is available to users while the detector is collecting primary data. The proposed system should have a high-speed transmission capacity (e.g. 10Gb/s (ten Gigabit/second) Ethernet or equivalent.

The safety controls must be implemented in software as well as in hardware for protecting the operators, instrument and specimens.

The softwares should be updated as required, free of cost.
| 3 | Accessories and spares | 3.1 Chiller, Compressor and UPS of adequate capacity ($\geq 30$ kVA) to ensure smooth and noiseless operation of all components should be provided. The chiller and compressor should be compatible with the proposed system, and all details should be provided.  

3.2 One additional set of auto grid loading system accessories that are delivered with the CryoEM e.g. assembly workstation, loading dock, tweezers, transfer dewars etc. should be provided.  

3.3 An automatic filling system for liquid nitrogen should be provided. 2 X 240 L Liquid nitrogen dewars should be provided. Details of the proposed anti-contamination device should be included in the submitted documentation.  

3.4 Plasma cleaner for cleaning cryo-holders, cryo transfer station, cold stage controller, dry pumping stations and all cryo-tools etc. for holders should be provided.  

3.5 Details of proposed anti-contamination device should be included.  

3.6 Data storage and computational infrastructure: Adequate computational infrastructure for data recording and storage along with all required accessories should be provided with the system. Softwares to operate the system, record data, and store and analyze data should be provided. Separate computer(s) should be provided for offline data analysis. High speed storage appliance with capacity of more than 600 TB, and transmission speed of at least 10 Gbps, is preferred. Overall, the computational infrastructure provided should allow smooth operation of the system and analysis
of the recorded data. Appropriate software for automated and manual operation, automated and manual data collection in all modes requested above and downstream data analysis for all applications (including single particle and tomography reconstruction) should be provided, as described before.

3.7 Vitrification system: The vitrification system should be capable of blotting followed by rapid cooling of aqueous samples. The blotting should occur on both sides/one side of the grid to allow even spreading/drying of the sample. Operational parameters should be reproducible and device should allow vitrification with high throughput with an easy and straightforward control of the process. It should be possible to control different parameters associated with the environment of the chamber and the blotting & plunging process.

3.8 Glow discharge/Sputter coater: The glow discharge unit should allow hydrophobic/hydrophilic conversion and hydrophilic/hydrophobic conversions of grids. The design of the unit should allow safe operation with appropriate safety interlocks along with easy-to-use user interface. A glow discharge unit combined with coater (for carbon as well as heavy metal coating) is preferred. A turbo pump equipped coater is expected.

3.9: Cryo-ultramicrotome: The cryo ultramicrotome should have a built in anti-vibration system, stereomicroscope with at least 50X magnification, and at least three different controllable LED light sources to enable different types of illumination. A knife stage with controllable cutting window and cutting speed
should be provided. A dual knife holder with the capacity to hold glass and diamond knives should be present. The system should be ergonomic and enable comfortable operation with adequate safety features. A touch screen or PC-based controller should be provided for operation of the ultramicrotome and cryo-chamber. It should be possible to recall stored settings from memory for user operation. Cryo attachment should enable operation at both ambient and cryogenic temperature, and rapid cooling and warming should be possible. Efficient LN2 delivery system with indicator and low-level warning should be provided with the system. A glass knife maker, a diamond knife and trimmer should be provided. Adequate consumables for sectioning and knife maker should be provided.

4. Technical expertise and manpower Requirement

It is expected that this system will be heavily utilized by structural and cell biologists in India. Thus, it is desirable that the vendor has installed at least one, currently functional, equivalent system in India; and at least 20 such equivalent systems worldwide. The following documentation should be provided for establishing technical expertise and support availability:

6. Worldwide installations of 300 kV cryoEM with similar configurations* in the 2015-2020 period, along with performance certificate from at least three
7. India-wide installations of 300 kV cryoEM with similar configurations* in the 2015-2020 period, along with performance certificate from at least one major user

8. List of research publications** in Pubmed/Medline/SCI from similar machines in the 2017-2020 period. List of structures submitted to EMDB/PDB should also be provided.

9. List of research publications** in Pubmed/Medline/SCI from similar machines installed in India in the 2017-2020 period. List of structures submitted to EMDB/PDB should also be provided.

10. Current average on-site attendance time within warranty period (In India/worldwide) for similar machines. Information in tabular form with breakdown issue, time of attendance and time of resolution should be provided.

The vendor is expected to provide trained personnel with at least 1 year of experience of operating and maintaining the proposed system, and all accessories. This personnel is expected to assist with installation; and to train scientists, technicians and students of IIT-Delhi, with little or no background knowledge of microscopy, to enable independent and precise operation. This personnel is expected to be involved in all aspects of single particle and tomographic data collection at IIT-Delhi during the warranty period.

5. Warranty

Five (5) years comprehensive warranty for the microscope and all accessory equipment, hardware and software is required from the date of installation. During the warranty period, the maximum on-site attendance time from first notification of a problem

Included in section 1
with either the system or accessory equipment should be 48 hours (2 days). After clearance of parts from customs, the maximum fix time should be 3 days. Any deviation will result in an extension of warranty by 5 days for per day of non-compliance.

It is expected that comprehensive warranty includes the cost of parts and labor. In case certain spare parts are exempt from warranty, a list of said parts along with documentation indicating the expected lifetimes of these parts, should be supplied. Two free of cost replacements for the FEG source should be provided within the warranty period of 5 years.

An additional 5 year comprehensive warranty (years 6-10) should be quoted separately.

The vendor should provide documentation ensuring availability of spare parts, repair kits as required and technical support for the microscope and all accessories for up to 10 years from the date of installation.

A 10% performance guarantee will need to be maintained during the period of extended warranty.

6. Pre Installation Requirements

Pre-installation requirements: Complete pre-installation requirements should be provided in a separate section during submission of technical bids. No deviation from this document will be entertained during installation.

7. System Consumable Parts

Basic frequently required spares should be provided for the entire period of extended warranty. A list of these items should be attached with the quotation.

* Equipment for biological sample usage ONLY

** For biological samples only
I have also enclosed all relevant documents in support of my claims, (as above) in the following pages.

We, ____________________________ hereby certify that all the information and data furnished by our organization with regard to this tender specification are true and complete to the best of our knowledge. I have gone through the specification, conditions and stipulations in details and agree to comply with the requirements and intent of specification.

This is certified that our organization has been authorized (Copy attached) by the OEM to participate in Tender. We further certified that our organization meets all the conditions of eligibility criteria laid down in this tender document. Moreover, OEM has agreed to support on regular basis with technology / product updates and extend support for the warranty.

The prices quoted in the financial bids are subsidized due to academic discount given to IIT Delhi.

Date: ____________________________
Tender No. :- .................................

To
The Director,
Indian Institute of Technology Delhi,
New Delhi- 110016

Dear Sir,

We manufacture of original equipment at (...............................address of factory..........................) do hereby authorize M/s (Name and address of Agent) to submit a bid, negotiate and receive the order format against your tender enquiry.

M/s. ........................................... is authorized to bid and conclude the contract in regard to this business.

We hereby extend our full guarantee and warranty as per clause ......................... of the terms and conditions NIQ for the goods and services offered by the above firm.

Yours Faithfully,

(Name)

(Name & Seal of Manufactures)

Note: -

1. **Items of indigenous nature or quoted in INR**, more than 1 authorized representative may participate in the same tender and submit their bids on behalf of their OEM/Principal/Manufacturer if the OEM permits more than one authorized bidder in such case as per their policy.

2. **In cases of agents quoting in offshore procurements**, on behalf of their principal manufacturers, one agent cannot represent two manufacturers or quote on their behalf in a particular tender enquiry. **One manufacturer can also authorize only one agent/dealer**

3. The letter of authority should be on the letterhead of the manufacturer and should be signed by a person competent and having the power of attorney to bind the manufacturer. The same should be included by the bidder in its techno-commercial unpriced bid.
Bid Submission

Online Bid Submission:
